

# Recollect... ENGAGE YOUR COMMUNITY WITH HISTORY

Your cloud-based special collection management and community engagement solution

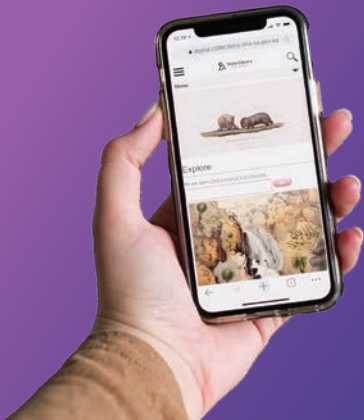

# REACH OUT AND EMPOWER YOUR COMMUNITY...

Recollects specialises in enabling libraries and organisations with special digital collections through providing effective collection management and a modern approach to community access and engagement.

Build your identity, enrich your collections, capture and manage new content, and discuss new ideas from anywhere in the world

Recollect is a powerful and highly configurable software platform that is grounded in five key principles: discover, access, engage, manage, and preserve. It can be delivered to customers anywhere in the world through a software-as-a-service subscription and is hosted on trusted Amazon Web Services. Recollect's scalable architecture ensures customers, both small and large, are supported.

## Discover

Metadata and contextual information are the core of any cultural heritage collection, they describe the relationships and history that give life to physical (or digital) assets. Each Recollect project is configured using this kind of descriptive metadata which links a customer's assets together, allowing for both structured and unstructured discoverability, intuitively creating a virtual breadcrumb trail through a collection.

## Access

Recollect generates unparalleled access to digital collections: it provides the ability to view all types of content, no matter their format, all within one platform, and it can be used on any device.

## Manage

Recollect manages all a customer's data in one place for simpler management and better activity reporting. With an image rich user interface and flexible configuration, Recollect simplifies and streamlines the management of collections.

## Engage

Data is no longer the end of the story, it is now just the beginning. Recollect provides a unique community-focused online platform to exchange ideas and explore identity in past, present, and future forms.

## Preserve

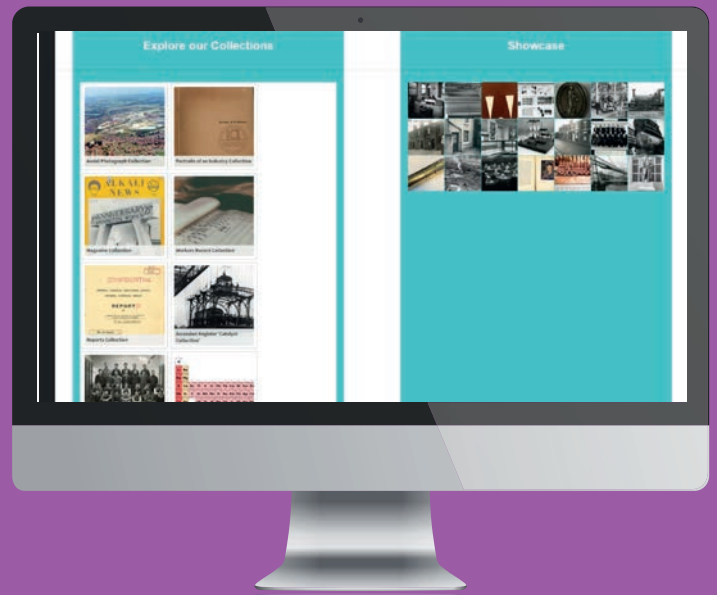

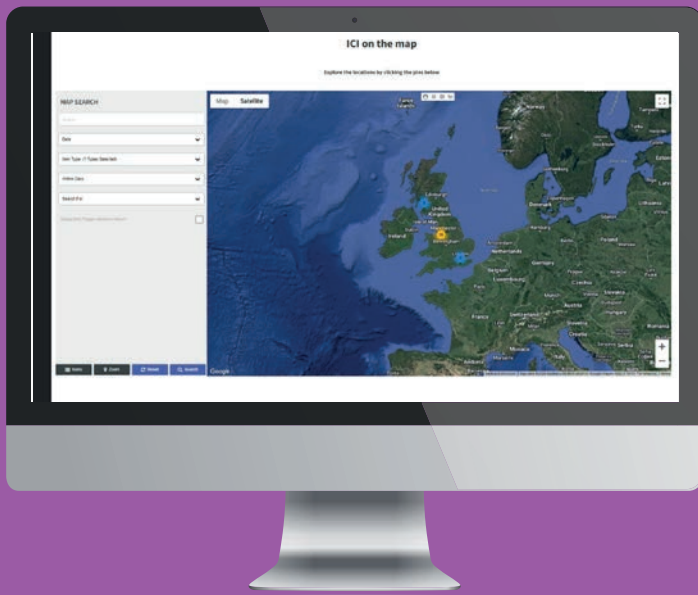

Recollect provides comprehensive preservation of a customer's digital assets and collections. It allows them to protect and preserve their digital assets online for future generations, communities, and stakeholders.

Recollect exceeded our requirements, being highly customisable, easily Google indexed, mobile friendly, using persistent identifiers and supporting a variety of media. It excels at community engagement through user contributions, tagging, curating favourites, commenting and social media integration."
