

Multi-Format 2 Carriers Microfilm Viewer

M/F2 Multi-Format Microfilm Viewer

DESCRIPTION

A high quality rugged front projection microfilm reader for single or multiple users. Ideal for all day viewing of roll films, fiche, jackets, or colour slides. For the Scientific Officer or Technician this unit will magnify microscope slide, x-ray negatives, culture dishes, transparent samples, or can be used as a profile projector.

The front projection screen is washable and glare free, and easily replaceable. Projection onto a wall is available as an optional extra.

Up to 4 different magnification lenses can be housed in the rotatable lens turret, and can be instantly changed from one magnification to another without any additional adjustment. The roll film or fiche attachments can be turned through 360° with indents every 90°.

For discussion groups or tracing, the right hand side of the machine will hinge upwards. Rear storage compartment is standard.
